

Lyall's Penstemon

Penstemon lyallii

Description: Grows 1-2 ft. tall with pale purple tubular flowers at the top of tall, leafy stems. Leaves are long and slender. Blooms between June and August.

Habitat: Grows in dry, well drained open sites and on rocky slopes in full sun.

Landscape Uses: It is hardy in rocky soil, on dry sites and steep slopes with lots of sun. It is one of the species that is at home in herbaceous borders and rock gardens.
